

1. Is the Python Standard Library included with PyInputPlus?
  - PyInputPlus is not a part of the Python Standard Library, so you must install it separately using Pip.
  - To install PyInputPlus, run `pip install --user pyinputplus` from the command line.
2. Why is PyInputPlus commonly imported with `import pyinputplus as pyip`?
  - We can import the module with `import pyinputplus as pyip` so that we can enter a shorter name when calling the module's functions.
3. How do you distinguish between `inputInt()` and `inputFloat()`?
  - The `inputInt()` function accepts an integer, while the `inputFloat()` function accepts a float value.
4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?
  - `pyip.inputInt(min=0, max=99)`
5. What is transferred to the keyword arguments `allowRegexes` and `blockRegexes`?
  - We can set a list of regex strings to the `allowRegexes` parameter to the PyInputPlus functions. We can also use regular expressions to specify whether an input is allowed or not. The `allowRegexes` and `blockRegexes` keyword arguments take a list of regular expression strings to determine what the PyInputPlus function will accept or reject as valid input.
6. If a blank input is entered three times, what does `inputStr(limit=3)` do?
  - It will raise a `RetryLimitException` exception.
7. If blank input is entered three times, what does `inputStr(limit=3, default='hello')` do?
  - Default value 'hello' is returned after three blank inputs.
